

Navipol® HF Dyes

For Petroleum Products and Industrial Applications

Sunbelt's Navipol® HF line of liquid dyes are single phase dyes supplied as approximately 50% concentrates in high flash solvents such as mineral seal oil or aromatic 200. They are miscible in petroleum products and can be pumped, poured, or metered directly into the product being colored. Navipol® dyes are true liquid dyes as opposed to solutions of powder dyes. The high flash solvents serve as viscosity depressants and strength standardizing agents while offering high color strength in liquid form and low insoluble levels. Navipol® HF dyes are recommended for use in:

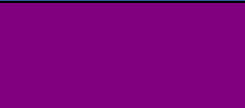

Petroleum Applications:

- Compliance with Federal Non-taxed Diesel and Kerosene Dyeing Regulation (26 CFR 48.4082-1)
- Automatic Transmission Fluid (ATF)
- 2-cycle oil and 4-cycle oil
- Lubes
- Greases

Industrial Applications:

- Candle Wax
- Color Coding of Solvents
- Solvent Based Inks and Coatings
- Oil and Varnish Stains
- Leak Detections
