

## Navipol® Liquid Dyes

### For Petroleum Products and Industrial Applications

#### Navipol® Liquid Dyes

Navipol® Liquid Dyes are high-performance, single-phase dyes designed for efficient and reliable fuel coloring. Formulated with approximately 50% dye in xylene, they offer superior miscibility with petroleum products and seamless integration into your process.

#### Why Choose Navipol® Liquid Dyes?

##### True Liquid Formulation

Unlike powdered dye solutions, Navipol® dyes are synthesized as true liquids from the start, providing exceptional solubility across a wide range of petroleum solvents and fuels. This eliminates the risk of undissolved solids, helping prevent clogged injectors and filters while ensuring consistent, reliable performance.

##### Easy to Use

Designed for convenience, these dyes can be pumped, poured, or directly metered into your system—reducing handling time and operational complexity.

##### High Strength & Stability

Navipol® dyes deliver strong, consistent color with excellent stability across a range of conditions.

##### Reliable in Low Temperatures

Even in colder environments, Navipol® Liquid Dyes remain pumpable and pourable, ensuring uninterrupted performance.

##### Unlimited Color Flexibility

All Navipol® Liquid Dyes are fully blendable, allowing you to create an infinite range of custom colors tailored to your specific fuel identification needs.

##### Ideal for Fuel Coloring Applications

Navipol® Liquid Dyes are engineered to meet the demands of modern fuel systems, providing dependable performance, ease of handling, and consistent results every time.

Red 164 (Solvent Red 164)		Yellow	
Red 164 D-75 (Solvent Red 164)		Yellow GR	
Red 164 D-50 (Solvent Red 164)		Brown 2 (Proprietary Blend)	
Blue 98 (Solvent Blue 98)		Navipol Orange M (Proprietary Blend)	
Purple (Proprietary Blend)		Orange 2 (Proprietary Blend)	
Green (Proprietary Blend)		Black 3 (Proprietary Blend)
